

Building Your Dashboard Development Portfolio

Scenario

As a Market Research Analyst, you have been tasked with creating an interactive dashboard that integrates data from various sources to provide insights into business performance. This dashboard will not only visualize the data but also enhance usability through iterative testing and peer feedback.

Learning Objectives

By the end of this assessment, you will be able to:

- Evaluate the usability and clarity of a data dashboard by conducting peer reviews and synthesizing feedback to guide design improvements.
- Design and construct an interactive dashboard that integrates data from multiple sources to provide a unified view of business performance.
- Implement interactive features that enhance user engagement and facilitate exploratory data analysis.

Your Tasks

1. Setup: Preparation and Resource Access

- Access the provided data sources, including CRM, web analytics, and marketing systems.
- Review the usability test plan template and peer review feedback form.

2. Core Activity Steps

- **Build Your Dashboard:** Create an interactive dashboard that integrates data from the specified sources, ensuring it presents key performance indicators effectively.
- **Conduct Usability Testing:** Use the usability test plan to conduct peer review sessions, observing user interactions and collecting structured feedback on dashboard clarity and navigation.

Your Tasks

- **Synthesize Feedback:** Analyze peer review feedback to identify usability issues and areas for improvement.
- **Iterate on Design:** Make necessary adjustments to the dashboard based on the feedback to enhance clarity and usability.
- **Retest the Dashboard:** Conduct another round of usability tests to verify that identified issues have been resolved and that the dashboard meets the 80% success criterion.

3. Documentation: Finalization

- Compile the usability test plan, peer feedback, and reflection report into a cohesive portfolio piece that demonstrates your design process and iterative improvements.

Submission Output

Upload your completed Dashboard Development Portfolio, which should include:

1. **Interactive Dashboard:** An interactive visualization that integrates data from multiple sources.
2. **Usability Test Plan:** A structured plan detailing the objectives and tasks for the usability testing.
3. **Peer Review Feedback:** A summary of the feedback received from peers during the usability testing.
4. **Reflection Report:** A reflective document (4–6 sentences) discussing your design process, usability findings, and iterative changes made to the dashboard.

Self-Assessment Checklist

- Interactive dashboard built and published.
- Usability test plan completed and submitted.
- Peer feedback collected and synthesized.
- Reflection report completed and submitted.

Checklist for Completion

- Dashboard meets the 80% success criterion based on usability testing.
- All required documents are included in the submission.
- Iterative improvements have been documented.
